Machine shop work is generally understood to include all cold-metal work by which an operator, using either power driven equipment or hand tools, removes a portion of the metal and shapes it to some specified form or size. It does not include sheet metal work and coppersmithing. LAYING OUT WORK " Laying out " is a shop term which means to scribe lines.

INTRODUCTION TO THE MACHINE SHOP GENERAL INFORMATION

A machine shop is a room, building, or company where machining, a form of subtractive manufacturing, is done. In a machine shop, machinists use machine tools and cutting tools to make parts, usually of metal or plastic. A machine shop can be a small business or a portion of a factory, whether a toolroom or a production area for manufacturing. The building construction and the layout of the place and equipment vary, and are specific to the shop; for instance, the flooring in one shop may be concr

Machine shop - Wikipedia

MACHINE SHOP PRACTICE S5 MECH 2015 10 1.2.6 Dial test indicator Dial test indicator have been used in the machine shop to test alignment and rotation measurement of machine parts. The dial indicator is a very precise instrument that measures distance between two parts and can be used to measure distances between two or more locations.
