Don't Bring Extinct Creatures Back To Life #1 Gut Health and why we need to throw out the rule-book with Professor Tim Spector Extinction Bad Genes Or Bad** He states that there's no known reason why a species couldn't live forever. This is fallacious since the world is constantly changing and species must adapt or go extinct. There's no such thing as a "bad gene", there are only genes which survive change, or don't. When enough don't the species disappears.

fitness (or adaptiveness of the organism) and that extinction of a given species or higher group is more bad luck than bad genes. The conclusions I will reach are not definitive but I hope the exercise will stimulate further exploration of the problem from fresh points of view and with fresh methods.

Extinction: bad genes or bad

He concludes, "Extinction is evidently a combination of bad genes and bad luck. Some species die out because they cannot cope in their normal habitat or because superior competitors or predators push them out. But, as is surely clear from this book, I feel that most species die out because they are unlucky.
