Non-volatile  
memory or non-  
volatile storage is a  
type of computer  
memory that can  
retrieve stored  
information even  
after having been  
power cycled. In  
contrast, volatile

There are five design issues associated with MTJ-based LUT circuits. The first design issue corresponds to the large area overhead of the sense amplifier due to a small difference in MTJ resistance. To overcome this issue, a nonvolatile

Download

Ebook Logic

logic-in-memory (NVLIM) structure has been proposed to reduce the overhead [18,19,24]. The second design issue is the stochastic nature of MTJ switching.
