Reference And Anaphoric Relations (STUDIES IN LINGUISTICS AND PHILOSOPHY Volume 72): von Heusinger, Klaus, Reference, von, K., Anaphora, the Semantics of, Egli, Urs ...

Reference and Anaphoric Relations (STUDIES IN LINGUISTICS AND PHILOSOPHY) The notions of reference and anaphoric relations have been discussed since antiquity and they are still one of the most challenging subjects in linguistics, logics and philosophy of language. The quest for a satisfying account of anaphoric reference has initiated a wide range of new and interesting approaches in formal semantics; and recent ...

Reference and Anaphoric Relations (Studies in Linguistics and Philosophy: Amazon.es: H.K. von Heusinger, U. Egli: Libros en idiomas extranjeros

Reference and Anaphoric Relations Studies in Linguistics and Philosophy * Endophoric * reference is a more general term that includes both anaphoric and cataphoric reference. So it refers to something inside the text, either earlier (anaphoric) or later (cataphoric). So any of the examples above of anaphoric and cataphoric reference are also examples of endophoric reference. Hope that helps.

Anaphoric, Cataphoric and Exophoric Referencing - Eslibase.com anaphoric expression gets its reference. According to the location of the anaphoric expression to its antecedent, two directions can be drawn for reference either to be backward or forward reference. The reference is 'anaphora' (backward) when the referring expression follows the antecedent. Consider the following examples: i.

The Role of the Anaphoric Referential relations in ... the roots of this book lie in the workshop reference and anaphoric relations which was held at the university of konstanz in june 1996 five main issues were discussed i the stoic and scholastic treatment of reference and anaphora ii quan tification and scope iii anaphoric reference iv the representation of indefinite nps with choice functions and v the relation between

This book is a collection of original research articles on the representation and in terpretation of indefinite and definite noun phrases, anaphoric pronouns, and closely related issues such as reference, scope and quantifier movement. A variety of frame works for the formal analysis of discourse semantics are represented, including dis course representation theory, file change semantics, dynamic Logic, E-type theories, and choice function approaches, which was one of the main issues the Konstanz project were concerned with. All of these frameworks are couched in the tradition of Montague Grammar, even though they extend the classical formalism in different directions. The developments emerged from the modern discussion of problems for the representation of cross-sentential anaphoric relations involving pronouns, and the interpretation of definite and indefinite noun phrases. After a decade of controversy, these approaches are merging together, enriching each other's formal mechanisms rather than expressing opposition. Thus, the articles in this volume concentrate on fundamental semantic questions, and also extend the current formalisms in order to capture more data. The roots of this book lie in the workshop "Reference and Anaphoric Relations", which was held at the University of Konstanz in June 1996. Five main issues were discussed: (i) the Stoic and scholastic treatment of reference and anaphora; (ii) quan tification and scope, (iii) anaphoric reference; (iv) the representation of indefinite NPs with choice functions; and (v) the relation between linguistic expressions, their rep resentations and their meanings.

The last 15 years has seen an explosion of research on the topic of anaphora. Studies of anaphora have been important to our understanding of cognitive processes, the relationships between social interaction and grammar, and of directionality in diachronic change. The contributions to this volume represent the next generation of studies in anaphora defined broadly as those morpho-syntactic forms available to speakers for formulating reference taking as their starting point the foundation of research done in the 1980s. These studies examine in detail, and with a richness of methods and theories, what patterns of anaphoric usage can reveal to us about cognition, social interaction, and language change.

First published in 1986, this book focuses on Anaphoric relations in the English and French languages, a phenomenon that involves a complex interaction between grammar and discourse. Studies of anaphora taking a largely 'textual' approach to the subject have tended to underestimate the effect upon its formation of referential and discourse factors, while studies framed within a psycholinguistic and computational perspective have been inclined to minimise the importance of the purely linguistic features connected with anaphora. This volume places the study of anaphora upon a firmer foundation by examining both its nature and functions in discourse, by pinpointing the range of factors relevant to its operation in the two languages under study, and by attempting to relate the textual and interactional perspectives within a more comprehensive framework.

This handbook presents an overview of the phenomenon of reference - the ability to refer to and pick out entities - which is an essential part of human language and cognition. In the volume's 21 chapters, international experts in the field offer a critical account of all aspects of reference from a range of theoretical perspectives. Chapters in the first part of the book are concerned with basic questions related to different types of referring expression and their interpretation. They address questions about the role of the speaker - including speaker intentions - and of the addressee, as well as the role played by the semantics of the linguistic forms themselves in establishing reference. This part also explores the nature of such concepts as definite and indefinite reference and specificity, and the conditions under which reference may fail. The second part of the volume looks at implications and applications, with chapters covering such topics as the acquisition of reference by children, the processing of reference both in the human brain and by machines. The volume will be of interest to linguists in a wide range of subfields, including semantics, pragmatics, computational linguistics, and psycho- and neurolinguistics, as well as scholars in related fields such as philosophy and computer science.

This volume contains a careful selection of papers concerned with actual research questions on anaphoric reference, a subject of current interest with various linguistic subdisciplines. This is reflected in this book as it methodically covers broadly invested approaches from cognitive, neurolinguistic, formal and computational perspectives, each contribution representing the respective 'state of the art' on a high theoretical and empirical level. The volume contains three thematic parts: Anaphors in Cognitive, Text- and Discourse Linguistics; The Syntax and Semantics of Anaphors; and Neurolinguistic Studies on the reception of anaphoric reference. The contributions investigate several Indo-European languages.

Discourse anaphora is a challenging linguistic phenomenon that has given rise to research in fields as diverse as linguistics, computational linguistics and cognitive science. Because of the diversity of approaches these fields bring to the anaphora problem, the editors of this volume argue that there needs to be a synthesis, or at least a principled attempt to draw the differing strands of anaphora research together. The selected papers in this volume all contribute to the aim of synthesis and were selected to represent the growing importance of corpus-based and computational approaches to anaphora description, and to developing natural language systems for resolving anaphora in natural language.

(Publisher-supplied data) Yan Huang is Reader in Linguistics, Department of Linguistic Science, University of Reading.

In this work, Ken Safir develops a comprehensive theory on the role of anaphora in syntax. First, he contends that the complementary distribution of forms that support the anaphoric readings is not accidental, contrary to most current thinking, but rather should be derived from a principle, one that he proposes in the form of an algorithm. Secondly, he maintains that dependent identity relations are always possible where they are not prohibited by a constraint. Lastly, he proposes that there are no parameters of anaphora - that all anaphora-specific principles are universal, and that the patterns of anaphora across languages arise entirely from a restricted set of lexical properties. This comprehensive consideration of anaphora redirects current thinking on the subject.
