~~It was meant to be a stopgap solution and later, to keep people alive until they could get a kidney transplant - a process that could take anywhere from six months to several years. However, the dialysis space hasn't seen much innovation in the 80 years since its invention, says Shah, a urologist and founder of Texas-based medical device startup Nephrodite.~~

~~This means that people can die while on dialysis if they do not have a kidney transplant, particularly elderly people and those with other health problems. Someone who starts dialysis in their late 20s can expect to live for up to 20 years or longer, but adults over 75 may only survive for 2 to 3 years.~~
