Most enzymes are proteins, although a few are catalytic RNA molecules. Catalytic RNA molecules are called ribozymes. Enzymes are high molecular weight compounds made up principally of chains of amino acids linked together by peptide bonds (Figure 1). Enzymes can be denatured and precipitated with salts, solvents and other reagents.

### **Enzyme ppt - SlideShare**

Enzymes are biomolecules that catalyze (i.e. increase the rates of) chemical reactions. Almost all enzymes are proteins. In enzymatic reactions, the molecules at the beginning of the process are called substrates, and the enzyme converts them into different molecules, the products.
